# Use of Agile Working Docks with PC's and Laptops

We recommend always using the same USB connector each time you connect to one of the Docks. After a few minutes the Keyboard and Mouse will initialise closely followed by the screens. You may need to use Windows Display Settings to get monitors in a sensible order

Once you've finished your session unplug the USB Dock cable plug the USB-C back in to the USB-A adapter (if this was removed) then reconnect to the PC cable if you removed it from there originally.

If you have any problems, contact chemeng.systems@ucl.ac.uk.

DO NOT REMOVE or ALTER ANY of the CABLES CONNECTING the DOCK
